Python for Data Science Practical

Practical - I

Roll No. : S003	Name: Aryan Raj
Class : SYIT	Batch : -
Date of Assignment : 15-07-26	Date/Time of Submission : 15-07-26

1a. Write a python code to print your profile.

Code:

```
# Input details from user
name = input("Enter your name: ")
age = input("Enter your age: ")
roll_number = input("Enter your roll number: ")
phone_number = input("Enter your phone number: ")
Class = input("Enter your class: ")

# Display profile
print("\n----- PROFILE -----")
print("Name :", name)
print("Age :", age)
print("Roll No. :", roll_number)
print("Phone Number:", phone_number)
print("Class :", Class)
```

Output:

```
Enter your name: Aryan Raj
Enter your age: 18
Enter your roll number: S003
Enter your phone number: 833489337
Enter your class: SYIT

----- PROFILE -----
Name : Aryan Raj
Age : 18
Roll No. : S003
Phone Number: 833489337
Class : SYIT
```

1b. write a python code to print addition of two numbers.

Code:

```
# Input two numbers from the user
num1 = float(input("Enter first number: "))
num2 = float(input("Enter second number: "))

sum = num1 + num2

# Display the result
print("The sum is:", sum)
```

Output:

```
===== RESTART: D:/S003
Enter first number: 23
Enter second number: 12
The sum is: 35.0
```

1c. Write a python code to print square root of number.

Code:

```
import math

num = float(input("Enter a number: "))

# Calculate square root
square_root = math.sqrt(num)

# Display the result
print("The square root of", num, "is", square_root)
```

Output:

```
===== RESTART: D:/S003 Aliyah
Enter a number: 25
The square root of 25.0 is 5.0
```

1c. Write a python code to calculate area of Triangle.

Code:

```
File Edit Format Run Options Window Help
# Input base and height from the user
base = float(input("Enter the base: "))
height = float(input("Enter the height: "))
|
area = 0.5 * base * height

# Display the result
print("The area of the triangle is:", area)
```

Output:

```
----- RESIARI. D./2003 Alayan 20-
Enter the base: 12
Enter the height: 20
The area of the triangle is: 120.0
|
```

1d. Write a python code to swap two variables.

Code:

```
# Input two variables from the user
a = input("Enter first value: ")
b = input("Enter second value: ")

# Swap the variables
temp = a
a = b
b = temp

# Display the swapped values
print("After swapping:")
print("First value =", a)
print("Second value =", b)
```

Output:

```
===== RESTART: D:/S003 A:
Enter first value: 12
Enter second value: 34
After swapping:
First value = 34
Second value = 12
|
```
